Tremblay, St. Laurent, and Cyrville Secondary Plan

1.0 Introduction

The Tremblay, St. Laurent, and Cyrville Secondary Plan provides direction on maximum building heights and minimum densities within the planning area identified in the Tremblay, St. Laurent, and Cyrville Transit-Oriented Development Plans.

1.1 The Planning Area

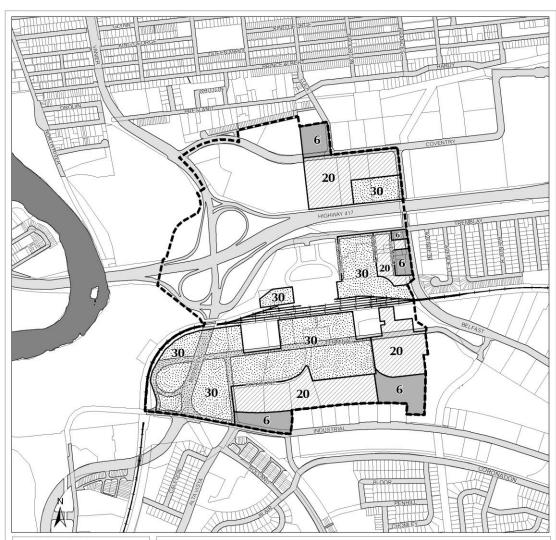

The Secondary Plan defines the extents of the affected area. The plan area is shown on Schedules A, B, and C.

1.2 Maximum Building Heights and Minimum Densities

The Secondary Plan defines maximum building heights and minimum densities for lands within the plan area. The maximum building heights and minimum densities are shown as annotations on Schedules A, B, and C.

1.3 Implementation

The minimum densities set out in this Secondary Plan will result in the achievement of transit-supportive development densities over the long term. The intent of requiring minimum densities is to set the stage for intensification so that development with increased densities can occur in context-sensitive locations at the time market pressure for density exists. In response to this the implementing zoning will provide flexibility by permitting existing constructed uses of land to be expanded and rebuilt at densities below the minimum densities in this Secondary Plan. Also in response, land estimated to be subject to development intensification pressure beyond 2031 in the TOD Plan for the related station area is permitted to remain in the existing zoning until such time as the owner requests rezoning in response to intensification pressure. At that time the property is to be rezoned to the appropriate TD zone in accordance with this Secondary Plan.
