

Participation in the Ottawa **Fuel Tank Replacement Rebate Program** is voluntary.

The Fuel Tank Replacement Rebate Program was established to help eliminate the risk to municipal drinking water supplies. The program is available to residential properties where existing fuel tanks are considered a significant drinking water threat under Ontario's *Clean Water Act*.

The program offers a rebate to decommission existing fuel oil tanks and convert to an alternate home heating source that is not a threat to drinking water sources.

The rebate will provide up to a maximum of \$15,000 to convert to sustainable green energy heating system, or up to a maximum of \$10,000 to convert to natural gas or propane/wood fuel sources.
